

Complete capabilities at your fingertips

The FrontRange IT Service Management solution family offers a complete, modular approach that helps IT organizations increase efficiency, reduce expenditures and improve overall service quality. Satisfy the demands of your evolving service desk with modules that are fully committed to HEAT® and IT best practices. Reap the benefits of a rich, low-risk resource that provides the flexibility to build out your service desk, increasing technician productivity and improving customer support.

Key features

FrontRange IT Service Management empowers IT with the functionality to rapidly respond to critical failures in business systems and provide proactive support. Technicians and end users have access to accurate, timely information through Web-based self-service and an extensive knowledge base.

- **Real-time reporting:** View real-time system data through an easy-to-use graphical dashboard. Dashboards can be tailored to meet a user's specific needs based on his or her role within the organization.

Create an unlimited number of roles-based dashboards to get real-time information on your IT organization.

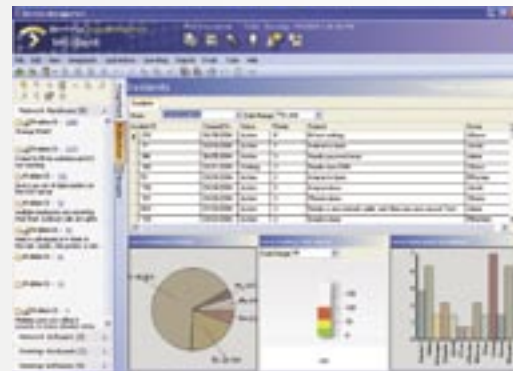

- **Business process automation:** FrontRange IT Service Management includes a standards-based business process automation engine that provides real-time alerts and event-driven rules processes. Compliance with BPML allows you to run business processes across multiple applications.

Use the powerful Workflow Editor to easily automate business processes.

- **Integrated architecture:** Because FrontRange IT Service Management shares a common architectural platform with other FrontRange products, it has a range of technical functionality and flexibility that is unmatched by competing service management offerings.

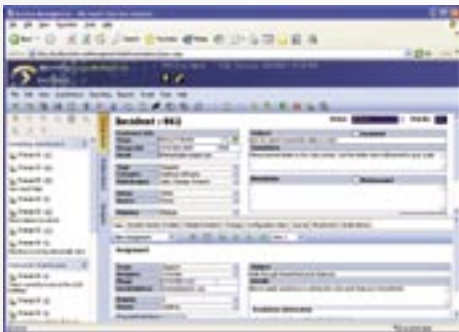

The use of a common technology platform allows all solutions from FrontRange to communicate with each other and share technical capabilities in such key areas as security, business rules and reporting. Users are provided with a single view of all activities no matter where data is stored.

Share and view service desk information from multiple sources.

- **Robust integration:** An extensible API allows you to integrate FrontRange IT Service Management with your existing applications and databases. This approach provides you with a single view of all activities regardless of where that data is located in the organization.
- **Anytime, anywhere access:** Smart client and Web client compatibility ensures access from any location. This approach reduces deployment and upgrading costs and allows users to choose the client that matches available bandwidth.

Access all IT Service Management applications from a standard Web browser.

- **GUI-based administrator tools:** FrontRange IT Service Management includes wizard-driven customization tools. These WYSIWYG, drag-and-drop tools allow administrators to create new objects, manipulate forms and fields, create new forms on the fly and much more—all without coding.

Create or modify applications to match your specific needs.

Attention HEAT® customers

FrontRange Solutions is fully committed to HEAT and its HEAT customers. For HEAT customers that need to integrate ITIL best practices into their processes, FrontRange IT Service Management provides the flexibility to add modules to their service desk solution. You can build out your service desk while increasing your technicians' productivity and improving customer support.

With FrontRange IT Service Management, you now have a new, modular solution that integrates with HEAT and extends its value by incorporating ITIL best practices.
